

Applied Ecology and Environmental Research

International Scientific Journal

OnlineFirst of AEER

Accepted Scientific Articles in Queue to Upcoming (not yet closed) Issues or Volumes

“OnlineFirst of AEER” allows accepted final version articles to be hosted online prior to their inclusion in a final online journal issue. This feature is commonly referred to continuous publishing. OnlineFirst provides clear benefits to all researchers and users of the journal's online content. The feature allows authors and readers to access the very latest papers in the field. Authors also benefit from greatly reduced lead times between submission and publication of articles, because, with OnlineFirst, manuscripts can appear online while other articles are being completed for an upcoming issue. An author's research will therefore reach its audience more quickly, enabling an article to receive greater usage and exposure, including earlier citation opportunities by related work

Each OnlineFirst manuscript is citeable using the Digital Object Identifiers (DOI). Digital Object Identifiers (DOI) are assigned to all AEER content for use on digital networks and the metadata associated with that content is registered with the DOI Foundation (www.doi.org).

These manuscripts should be cited as follows:

Names of Authors (year of publication on the paper): Article title. - Journal Title (Applied Ecology and Environmental Research). Volume (Issue): Pages (which are on the paper) DOI: 10.15666/aeer/xxxx_xxxxxx

Each article DOI is registered with CrossRef (www.crossref.org), allowing permanent resolution to each article and giving publishers the ability to link their references to articles whenever they are cited.
